michael wrote on Mon, 27 August 2007 12:22 Works for me here on vista with mingw besides the following warning and errors:

This seems to be a path-problem and is not new but still present:

gcc: Files\MySQL\MySQL\ : No such file or directory

gcc: Server\ : No such file or directory

gcc: 5.0\include: No such file or directory

And the building-time is 5-times longer compared to xp:

OK. (5:17.65)

With XP it build my project within 1:30

Can you please activate "Setup/Verbose" and then post here a commandline used to invoke gcc?  
(Will be printed in console.).

Mirek
