luzr wrote on Mon, 27 August 2007 09:45As for scrollbar, well, I got somewhat ready for that Cool. I thought I remembered something mentioned about this.

luzr wrote on Mon, 27 August 2007 09:45MT issue looks very strange. Any idea?

Through trial and error it seems I have found the problem:

```
#ifdef flagMT
```

```
#ifdef COMPILER_MSC
```

```
__declspec(thread)
```

```
#else
```

```
__thread
```

```
#endif
```

```
#endif
```

```
MCache mcache[16];(HeapImg.h:34, heap.cpp:186)
```

This code is the sole difference between correct/incorrect theming. With the '\_\_thread' declaration theming is correct, without it always appears as 'Classic' style.

Next question is: Why?
