First you retrieve the source control, then see what was selected:

```
if(AcceptInternal<TreeCtrl>(d, "mytreedrag")) {  
    const TreeCtrl &src = GetInternal<TreeCtrl>(d); // JT  
    Vector<int> sel = src.GetSel(); // JT  
    // Etc.  
    tree.InsertDrop(parent, ii, d);  
    tree.SetFocus();  
    return;  
}
```

James
