Actually, it turns out this is a bit of a cock-up (IMO).

Basically what happens is that the EditTime control is really an EditTimeANDDate control, and always expects a valid date to be entered first.

For example, with date format mdy:
23:00   - not valid
11:01:2007 - valid
11:40:00   - not valid
11:00:2007 - not valid
11:34:1900 - valid
11:34:1900 23:30:01 - valid

So currently Upp has a 2 Date only controls and a Date AND Time control, but no Time only control.
