michael wrote on Wed, 29 August 2007 05:04Mirek, i added a note to the last posting, any idea about that?

Linking...

c++.exe: C:/upp/out/MySql/MINGW.Gui\MySql.a: No such file or directory

The error posted above occurs when i first build my project. When i then do a second build the error doesn't occur anymore. When i start a rebuild, the error is there again. This happens with upp 2007.1 and dev2b. I never had this error before.

PS.: Maybe the reason why it was OK before was that current dev2 version sets the correct number of HYDRA threads...

Mirek
