Subject: no String::Replace() ?

Hi,

I'm adapting some code written to Apple CoreFoundation:

```
String es = s;  
es.replace("\", "");
```

I came up with this:

```
String es = s;  
int pos = 0;  
while ( (pos = es.Find("\", pos)) >= 0) {  
    es.Insert(pos, "\\");  
    pos += 2;  
}
```

First, does this look correct?

Second, would you think Replace() method would be a usefull addition to String?

Guido
