Subject: SQL*, SQL&, SQL*:: ???
Posted by jeremyc on Sat, 01 Sep 2007 19:34:32 GMT

I do not understand all of these that I see in code. Can someone tell me the difference between:

SQL * Select(...);
SQL & Select(...);
SQL * ::Select(...);

I've seen it in example code all three ways. Maybe more.

Thanks,

Jeremy
