Well, as it seem the "I do not like theide, give me a .lib" topic has returned once again, here is the simple dirty proposal how to solve the problem:

I am willing to add to each .icpp file a dummy empty registration routine. E.g. into CtrlLib.icpp, I would insert

```
void InitializeCtrlLib() {}
```

This way, you can call this in GUI_APP_MAIN when building outside theide.
