sergei wrote on Mon, 10 September 2007 11:57I've found that XML.h, that is included just before Lang.h and i18n.h that I have trouble with, has #include <Core/Core.h>. XML.cpp includes "Core.h" too.

This include is a sort of benign bug, it was forgotten when moving the header from development package to Core. #include guards of Core.h made it effectively a NOP....
