Hi Mirek,

luzr wrote on Mon, 10 September 2007 14:15piratalp wrote on Mon, 10 September 2007 13:07
NOTE: I've just wrote it in seconds from what's in my mind, I've done a Ribbon Chameleon Skin
for Ultimate++ that can render both Office 2003 and Office 2007 styles with any combination of
colors, I would like to contribute it to Ultimate++ but I'll have to add some code to Chameleon to
support very basic things like Palettes and also change some widgets that have no ChPaint calls,
how can I stay in synch with development version (uvs?)? Mirek?

Sounds good. I can provide you the read access, but that IMO would not solve the problem
anyway.

IMO, CtrlLib and Draw is relatively stable these days. So if you have latest dev, just do what you
need and then send here a .zip of all packages (or perhaps files) you have changed, we will
merge it...

Mirek

I've done all modifications on 2007.1 package and mantained all code inside external files,
however, much of this code should go into Draw/Cham.h & Draw/Cham.cpp. Should I merge it
and send to you?

NOTE: I've only Ribbonized current skinnable controsl, ChPaint for controls like ToolBar is
pending... (I can make it but I have to study internal control Paint & Chameleon calling inside
widget classes first)

Mauricio
