I managed to solve the icon problem. Seems I need to have the icon exported into "icon.ico". I thought that those 6 bytes icons were strange...

But I found another bug. If a create a menu with a caption containing the accessor key multiple times (for example "Zoom &Out"), when I press Alt the first of that character will be highlighted (as if I had "Z&oom Out"). This is a minor detail but things like this shouldn't be ignored.

Thank You
