Ok I've tried debugging projects straight out of examples and reference and nothing debugs. Its not my code.

Ach who cares about breakpoints - DUMP works fine

Is there a better way to show variables than

```
#ifdef _DEBUG
String s = Format("GetProbability() using tab file:
startRadians=%f,stopRadians=%f,v=%f,vstep=%f,res=%f,f=%f",
    startRadians,stopRadians,v,vstep,res,f);
DUMP(s);
#endif
```

?
