unodgs wrote on Tue, 18 September 2007 21:40I also copied mainwidnow.exe example from qt on upp public ftp. Look for upp/public/!mainwindow!.7z Of course you don't have to follow their way. I only wanted to show you one complete solution.

Ok, I will look for it and will examine the qt example for sure. As I said before, I am open to all suggestions.
Also, I will probably update this small demo-like example per-week. You will be able find the updated exe in my first post. Thank you for your help and feedbacks.
