Quote:Yes, quick tabs use their own rendering "system", In fact there is only one method you need to change QuickTabs::DrawTab. Now it uses bitmaps from QuickTabs.iml, but you can refeactor it to support upp themes.

Ok, I can with some time & patience, but chameleonizing it will need to create a ChQuickTabsStyle and have to reference it inside customized skins srcs (like ribbon one) and it will force to include the package in final app..

Regards
