---

Sorry for the delay in my response.

I tried using the various methods and while the date I was looking for was displayed in the control, it was not in the correct format and if I elected to display the CalendarCtrl the current date was highlighted, not the displayed date.

I've been trying various methods to update the Ctrl properly and in a cleaner method than I already used.

Something else to note is that the function

```
void Calendar::SetDate(const Date &dt)
```

does not set the selected date as expected.

Dave
