mapo wrote on Wed, 19 September 2007 14:13Hi,

i`m looking for using splitter, but have some strange problems with SetMin method.
if I want splitter to be ~380px wide, i have to cal S1.SetMin(0, 5000);, but documentation states, that second parameter is in pixels.

Am I doing something wrong?

I attached example project.

mapo.

I have just checked, unfortunately, Min seems to be in 1/10000 of width (which is, if nothing else, quite impractical).

Will look into the issue tomorrow (perhaps adding SetMinPixels).

Thanks for testcase.

Mirek
