Util.h:

```
class Exc : public String {
public:
 Exc(); // throw according to GetLastError()
 Exc(const String& desc) : String(desc) {}

// void Show() const;
};

class AbortExc : public Exc {
public:
 AbortExc();
};
```

There's no word "Exception" anywhere, not even in comments.
Makes it hard to find trough text search if you are just checking around if the UPP has some predefined Exception class.
I don't ask as much for renaming the class, as for the comment added.
