Well, I am afraid I have to say you are right. So far, each property is considered a complete value, in this case a complete definition of Font... But in this case, this is obviously contraproductive...

Perhaps we have to use some standard font size in the layout and use something like:

```
Font(StdFontSize()).Bold()
```

in .lay file?

Another issue is that in fact, we perhaps should scale even fonts with height according to current default font settings. Which would make it something like

```
Font(FontZoom(15))
```

Any logical flaws in this thinking?

Mirek
