Bad news I've rebuilt with Code::Blocks/MinGW, and here are the results:

Debug: 548MB / 132 mins

Release: 13MB / 112 mins

That's similar to my previous results (size increase is probably due to increased number of working packages). I have to conclude that MSVC indeed builds incredibly huge release libs... This might be related to the compiler/linker bug on release, but this time I didn't use SCU, and it worked.
