A little note (again) on help system : I find it really unusable. That's the only thing I don't like on TheIde. I'm resorting with some fiferox windows opened by side, but I'm really missing a word search also on custom help files from the ide, as it has been done on codeblocks, for example.

Yep, there is a lot to be improved.

However, the basic search in help files is there ?!

Mirek
