luzr wrote on Tue, 25 September 2007 11:44I think it would be better to solve INITBLOCK SCU issue by using

BLITZ_INDEX__

macro.

But where/how is BLITZ_INDEX__ defined? Especially if BLITZ isn't present.

Did you try to use lib or SCU? Did any change make it into the main source?

P.S. since U++ and many plugins are BSD-style licensed and programs are statically linked, what exactly should be present in the documentation of a program using U++? One copyright notice per package/plugin? Is there a compilation of licenses to be included?
