Hi,

The query option is acting wierdly. Sometimes it reads the selected header and,sometimes it does nothing (I've tested on U++ headers too). Is there a bug or could it broken? I'm currently using 709-dev1 , but it was all the same with 708dev-b2.

And I have one more thing to ask. When I doubleclick on the classes of the query pane (when it works well), it lists the methods/members of the class, but I can't go back up to the namespace. there is nothin like "go up" or "go back" button/menu. Is there a way to do that? I'm tired of querying again and again, just because I can't go back one level up in the namespace.
