
Subject: ButtonOption has no disabled state? [solved w/ ::Disable()]

Got ButtonOption control on my layout. Say, it`s called stopButton.
I want to make it disabled (grayed and not responding to user input).

None of this:

```
stopButton.SetEditable(false);  
stopButton.SetReadOnly();
```

worked.

How to make ButtonOption disabled?

P.S. Looked into sources:

```
void ButtonOption::LeftDown(Point, dword) {  
    push = true;  
    Refresh();
```

```
} And it seems like there`s no checking for enabled/disabled state.
```
