Subject: ButtonOption has no disabled state? [solved w/ ::Disable()]
Posted by Mindtraveller on Sun, 30 Sep 2007 19:43:58 GMT

Got ButtonOption control on my layout. Say, it`s called stopButton.
I want to make it disabled (grayed and not responding to user input).

None of this:

```
 stopButton.SetEditable(false);
 stopButton.SetReadOnly();
```

worked.

How to make ButtonOption disabled?

P.S. Looked into sources:
```
void  ButtonOption::LeftDown(Point, dword) {
 push = true;
 Refresh();
} And it seems like there`s no checking for enabled/disabled state.
```
