This package provides two controls that give to ability to have dynamically expandable/collapsible layouts, similar to MS Outlook (in function, if not appearance).

The style shown is the default, but can be redefined using a Chameleon.

ExpandFrame: A frame that can be applied to any Upp Ctrl and allows the user to hide/show it's child ctrl. A simple example:

```
TopWindow wnd;
```

```
ExpandFrame frame;
```

```
DocEdit editor;
```

```
frame.Left(editor, 300).SetTitle("Left-aligned editor").Expand();
```

```
wnd.AddFrame(frame);
```

```
wnd.Run();
```

ExpanderCtrl: This is container ctrl that allows the grouping of ExpanderFrames with minimal effort from the programmer. A scrollbar is automatically provided when necessary.

```
TopWindow wnd;
```

```
ExpanderCtrl expand;
```

```
DocEdit editor;
```

```
expand.AddExpander(editor, true, 300).SetTitle("Vertical frame container");
```

```
wnd.Add(expand.SizePos());
```

```
wnd.Run();
```

See the ExpandFrameExample package for a further example.
