mr_ped wrote on Wed, 10 October 2007 08:27drop uvs in favor of svn on better line, give users rights to modify main branch, or let them create experiment branches, and the process of modifying/bending -> adopting -> merging with core by users will get much easier. Also staying in sync with recent developments will be easier on linux when svn will be always most recent.

I am planning nightly builds, nightly svn updates. I guess experimental branches are the next thing to do.

Still reluctant about rights to modify the main branch though...
