Alex wrote on Sat, 20 October 2007 06:40Hi,

I work for a few months with upp and now I have a problem with sqlite:

```
Sql sqlVer;
Sql sqlRaum;
Sql sqlNew;
```

```
sqlVer * Select(RAUMID).From(VERANST).Where(VID == id);
sqlRaum *
Select(SEKTION,REIHE,PLATZ,PREISGR,XDISPL,YDISPL,COLDISPL).From(RAUMPLAN).Whe
re(RNR == sqlVer[RAUMID]);
String TableName = Format("%08d",id);

String s = "CREATE TABLE V" + TableName;
s += " (ID integer primary key autoincrement , SEKTION integer, REIHE integer,";
s += " PLATZ integer, PREISGR integer, XDISPL integer, YDISPL integer, COLDISPL integer)";

sqlNew.Execute(s);
```

Generates a error:

ERROR SQL logic error or missing database(0): CREATE TABLE V00000013 (ID integer primary key autoincrement , SEKTION integer, REIHE integer, PLATZ integer, PREISGR integer, XDISPL integer, YDISPL integer, COLDISPL integer)

ERROR database table is locked(0): Resetting statement: CREATE TABLE V00000013 (ID integer primary key autoincrement , SEKTION integer, REIHE integer, PLATZ integer, PREISGR integer, XDISPL integer, YDISPL integer, COLDISPL integer)

Can someone please tell me what is wrong here.

Thanks in advance,

Alex

Well, I guess this really is not an U++ problem, but some issue with your SQL and/or Sqlite. My first wild guess is that the table already exists in the database. Try DROP TABLE first to find out...
