Alex speaks with itself

It looks \*not\* simple (for me), but probably the best if I do so, because c&p over MS-Word or Openoffice looks terrible.

Hi,

maybe it is for someone interesting. I have built in my program a menuitem (only in debug mode) from where I can create all html-files from topic-files, for easy updating my online help files. I think it is not yet perfect, but it works .

Here are a little sample:

<http://www.pdservice.de/upp/Topic2Html.zip>
