
Subject: console + WIN-GDI

Hello folks,

I am using WIN2K. At the console (without U++) the WIN-GDI-funcs are not supported obviously. So i tried a Core_console, with U++. Now the WIN-Clipboard-funcs are accepted, but not the SetPixel() (WIN-GDI):

(translated from German)

Linking...

```
core_console_win.obj : error LNK2019: not resolved external symbol '__imp__SetPixel@16', referred to in function "'void __cdecl ConsoleMainFn_(void)" (?ConsoleMainFn_@@YAXXZ)'
```

```
C:\upp\out\MSC71.Debug_full\core_console_win.exe : fatal error LNK1120: 1 unresolved external symbol
```

I need to cover the GDI-funcs at the console too, for drawing at the desktop, printer and memory-bitmaps. I had the same problem at a WIN2-project. Another WIN-func (for the soundboard) was accepted, but the GDI-funcs seem to be a problem.

Now well, that's a linker-error, but what to do? Do i need a particular lib for the WIN-GDI-funcs, or alike?

with kind greets
Martin
