I can see that avoiding makefiles was a design goal. However if you want this system to be used, ya gotta have it for the initial build.

BTW, why? Make is a good thing. It speeds up the build by not rebuilding things that are not out of date, it can be used across multiple processors and computers (check out distcc) and is a very fast process. You guys are doing some amazing work, but this to me looks like re-inventing the wheel.
