Quote:Oops... with these calculations and 2-3 sec uncontrollable delays... just forgetting about D I said that they can accur. They are by far not uncontrolable, and only happen in some apps. And I really wish they were so short in Java, but there they are a lot longer and totally uncontrolable, yet it is still used a lot (too much). With my application I was wery happy with it's performance. And very short allocation time plus almost zero deep copies can make up for it.
