I do not use SetLanguage. Should I? In my Windows installation the active system locale is Finnish. Or should I separately define locale for Upp somehow?

As for <MM> format, I do not have a strong opinion about this, but for me a number would be enough. It may be easier for people who do not speak english natively, but still need to access this widget on a system with English interface language.

Actually, I used already the SwapYearMonth..

Thanks,

Tom
