irrdev wrote on Sat, 10 November 2007 14:42 Thanks for the replies! Yes, Debug mode worked for me, too. Debug uses Shared Builds by default, whereas the other options do not. Therefore, by selecting Optimal and also changing the "Link Build" option to "Shared Libs," everything works fine. This should be looked into though, since it would be nice to have Static linking support. There also should be official notes for new users, since it might be rather confusing. Anyway, thanks for the help!

The problem is that at present the Linux package maintainer is quite busy so there's not great support - anyway I'm glad new Linux dev version of the IDE started to work again ^^

David
