To be honest, your widget is far better than mine (at least, in functionality ) And I'm really impressed by the progress. I think i will need your help (If you dont mind) for the autohide feature. Mine is not very good Which ctrl did you use to create that sliding pane?

ps: There is a bug in your docktest.exe which leads to crash on Xp and Vista (basic):

When I try to undock (float) a tabbed window via the dropdown menu ("floating"), AND when it asks: "There are multiple tabs open, which would you like to float", if I select the "All other tabs" option, the example crashes immediately.
