Thanks. I do have one more problem though:

The new DropDate/DropTime ctrls are very nice, a big improvement over the previous versions.
However, I have a custom Date control that I want to have the same functionality. I previously did
this by reproducing some of the DateTimeCtrl code, but with the new template structure I should
be able to do this with:
class MyDropDate : public DateTimeCtrl<MyEditDate>
Unfortunately because the bodies of some of the DateTimeCtrl member functions are in a cpp file
you can't use the template with anything not defined in the header (ie DropTime and DropDate).

Would it be possible to move the bodies of these functions into the header? There are only four
functions without too much code.

Cheers,
James
