One mor ething to note is:

if I install the mingw-compiler version of upp including the mingw libraries I can use the msvc compiler from anywhere. The error From above does only occur, if I only use msdev 8.0 compiler...

Greetings, Tom

Following what Tom mentioned, I, too, uninstalled the upp-win-2007.1.exe and installed upp-mingw-2007.1.exe instead. Using the msc8 configuration, I'm able to compile and link projects under MyApp.
