Hi,

I have an sqlctrl showing to columns of a database table (ID, NAME). It is showing 5000 rows of data.

How to I get the data from the second row, second column?

I trying this without success:

```
Value k(DBGrid.Get(1,1));  
String s=k.ToString();  
PromptOK(s);
```

or

```
Value k(DBGrid.Get(0,1));  
String s=k.ToString();  
PromptOK(s);
```

or

```
Value k(DBGrid.Get(1,0));  
String s=k.ToString();  
PromptOK(s);
```

Is this the right way? It seems to show always the value of the first column. How to get data from a Value Type?

Env: WinXP, upp 2007.1

Thanks

Alex
