Quote:

OK.. so.. in fact your code runs, but try with another layout.
For example try a layout with a label, some arrays and buttons, and the famous myarray
Try to do it with the layout editor.

Then try your code again.. without "Add(myArray.SizePos());"

And you will see the problem i'm talking about.
There is a grayed case, but the button don't appear.

Yes, I've encountered the problem you've mentioned. And guess what: It has a very simple solution
Just add, "myArray.Layout()", and voila! it works
(I hope it will work in your case too)

I'm not sure, but this could be a bug...

I've updated the example, and added the "myArray", and some other ctrls with layout editor.
Please take a look at it.
