luzr wrote on Mon, 05 December 2005 22:51I have to apologize... this time you understood my code better than me "Set" is further level of division, you are really supposed to use AddFrame to add more "fields".

I have created this nice reference example to demonstrate StatusBar:

```
#include <CtrlLib/CtrlLib.h>

struct PosDisplay : Display {
    Color color;

    virtual void Paint(Draw& w, const Rect& r, const Value& q,
                      Color ink, Color paper, dword style) const {
        int i = q;
        w.DrawRect(0, 0, i, r.Height(), color);
        w.DrawRect(i, 0, r.Width() - i, r.Height(), SWhite);
    }
};

struct App : TopWindow {
    StatusBar status;
    InfoCtrl pos;
    InfoCtrl x, y;
    PosDisplay dx, dy;

    virtual void MouseMove(Point p, dword)
    {
        pos.Set(0, AsString(p.x), 40);
        pos.Set(1, AsString(p.y), 40);
        x.Set(PaintRect(dx, 100 * p.x / GetSize().cx));
        y.Set(PaintRect(dy, 100 * p.y / GetSize().cy));
    }

    virtual void LeftDown(Point, dword)
    {
        status.Temporary("Left mouse button pressed!");
    }

    App() {
        Sizeable();
        SetFrame(FieldFrame());
        AddFrame(status);
        status.AddFrame(pos.Right(100));
    }
};
```

```
status.AddFrame(x.Left(100));  
status.AddFrame(y.Left(100));  
dx.color = LtRed;  
dy.color = LtGreen;  
}  
};
```

```
GUI_APP_MAIN  
{  
    App().Run();  
}
```

Once again, sorry for misinformation, last time I visited StatusBar was two years ago and never used it above simple assigning text to it....

THANKS CHAMPZ !!!
it's did help me too !!!
