---

Core06.exe yields:

Quote:...

a.Is<int>() = false

a.Is<double>() = false

b.Is<double>() = false

c.Is<int>() = false

c.Is<Date>() = true

d.Is<String>() = true

...

U++ Core value types tutorial, 6. Value, says:

Quote:

a.Is<int>() = true

a.Is<double>() = false

b.Is<double>() = true

c.Is<int>() = false

c.Is<Date>() = true

d.Is<String>() = true

Who is right?

Werner
