Andy2222 wrote on Sun, 02 December 2007 00:36Is there some easy way to setup the U++ IDE to output Linux compatible files/bins? Meaning cross compile on windows for Linux?

As far as i can see only the mingw libs are included in the windows version, so what all is needed for the Linux setup?

thx

Hi,

as far as I know there is no such possibility.
What you can do is to compile the same source code on a linux platform.
