Hi,

thanks for your answers.

In fact i need to fill an array with a kind of widgets where the user can click on it. When clicking, the program will modify some other labels and arrays.

So yes i need interactivity with the user, and i need a userfriendly design, not an OOo Calc like array..

That's why i want to create widgets with labels, colors and images.

I'll try your code later but thanks for help

jf
