Thanks mrjt,

your code (first example) runs pretty well, but how to add elts to the array when the application is running ?

I tried to create a simple method like :

```
void AddTruc(String o, String s, String a) {  
    CallerInfo c;  
    c.callername = o;  
    c.country = s;  
    c.telephone = a;  
    array.Add("test", "test", RawToValue<CallerInfo>(c));  
};
```

and further in the code :

```
GUI_APP_MAIN  
{  
    MainWindow mw;  
    mw.Run();  
  
    mw.AddTruc("joe","USA","09890");  
}
```

but nothing appear
