---

Hi,

I tried Clipboard() in HomeBudget:

=====

.....

```
categories.WhenInsertRow = THISBACK(InsertCategory);
```

.....

```
categories.Appending().Removing().Editing().Clipboard();
```

.....

===== =

But When copy any multiple rows, only one row data can be done when "paste as Appended".

The SQL statement in recorded file show the data in cell are NULL:

"SQL\* insert into CATEGORIES(GR\_ID, NAME, DEFVALUE, PM, INNEWMONTH) values (4, NULL, NULL, -1, 0)..."

Maybe it's a UPP bug?

I also noticed that the Paste and write to SQLite3 function can be coded as follows:

=====

```
void gridctrl::Paste(int mode)
```

```
{
```

```
if(!clipboard)
```

```
return;
```

```
Gridclipboard gc = Getclipboard();
```

```
if(gc.data.IsEmpty())
```

.....

=====

But what is the name(XXX) of the CALLBACK I can use like below:

```
categories.XXX = THISBACK1(Paste,a);
```

Thanks in Advance.
