Subject: "cannot find lgtk-x11-2.0" under gentoo linux

Hi everyone,

I'm stuck on a quite strange problem. I'm not sure where exactly to check and so far I've not understood why it happens.

When I try to build theide (current svn trunk), I get the following error:

/usr/lib/gcc/i686-pc-linux-gnu/4.1.2/../../../../i686-pc-linux-gnu/bin/ld: cannot find -lgtk-x11-2.0
To anticipate some questions, I have gtk version 2.12.1-r2 compiled from sources and installed (using emerge). Standalone gtk applications compile fine, I only get this problem under theide.
libgtk-x11-2.0.* files and symbolic links are present in
/usr/lib.

/usr/lib is of course present in the library path configuration in theide.

I use theide precompiled from 2007.1 distribution

GCC is version 4.1.2.

Anyone has a clue how to make gcc happy about gtk library finding?

Thank you in advance.
Lionel
