mr_ped wrote on Mon, 27 February 2006 04:49: Today I tried to install 602RC exe, and I forgot to change path, so I hit Esc immediately after Enter several times.

Only "C:\upp" directory was created, and then the installer crashed after short while.

In the buglog file there was something about invalid source.

Thanks.

Is it worth fixing for the final release? (It would probably mean repeating RC).

I guess I will fix it for the next release...
