Sorry for the delayed reply. Very nice.

I personally think the second version is both prettier and clearer, partly due to the 3D effect.

I noticed the problem with the background image on the vertical bars, so I've attached a new version with separate values for vertical and horizontal bars. If you set it like this:

```
background[2] = RotateClockwise(/*Image from background[0]*/)
background[3] = RotateClockwise(/*Image from background[1]*/)
It should look better.
```

And you getting the theme information from the OS for that look? If you are I would love see the code, I could use it for a number of other things I'm working on.

James
