cbpporter wrote on Sat, 15 December 2007 22:06I just noticed that the MINGW debuger is extremelly stupid and often not able to show me basic values in the Autos tab, and in the Watch nothing is displayed for those values. Could this be a new problem, or is the debuger (and has been) quite limited.

VS debuger works well though. But the annoying bug with semi-random files beeing open in TheIDE after run is back (not sure if it ever went away).

Above problem is fixed.

As for GDB, yes, it is a pity. It looks like the only fine solution is to avoid GDB and debug "directly"... which is not a trivial thing to do (but, after all, what is
