Mindtraveller wrote on Wed, 12 December 2007 23:16 Recently I finished project. It included new upgraded version of ConveyorThread and brand new RS232Thread class.

RS232Thread is really advanced helper class useful i.e. for industrial automation, when it's necessary to have some good tool for programming COM-port (RS232) i/o.

I'd like to contribute these classes into some package into U++. For now, they are targeted for Win32 only. It is due to Mutex and Semaphore limitations listed above.

I think, you can post it here and a good Linux programmer could finish it. These classes seems to be very interesting
