I like the menu, but I'm confused about the bar color. Maybe it should be "more blue".

Anyway it's not the point. I wanted to ask if it's possible to write theme capture app. For example I run the app in winxp with clearlook theme I press save as upp theme and it produces files similar to BlueBar ones. I mean this app should produce chamelon c++ files. That would be really cool and allow easily to create theme that could be statically linked and used in win2000 for example. It should not be too hard as at runtime you have chamelon structures (ToolBar::Style eg.) already filled.
